## About product number

CATO reference standards are separated into three categories.

The first category is neat standards, in product number of it, the first letters is "C", and the product number is consists of four English letters plus six digits, such as: COT111601.

The second category is the solutions of individual compounds, in product number of it, the first letters is "L", the product number is consists of four English letters plus six digits plus "-" plus two English letters, the last two letters indicate corresponding solvent, such as: LPAE111736-HE.

The third category is the mixtures of compounds, in product number of it, the first letters is "M", the product number is consists of four English letters plus six digits plus "-" plus two English letters, the last two letters indicate corresponding solvent, such as: MPAE111723-HE.

The first four letters in product number, indicate the product classification, details as follows:

<b>CWLT</b> Textiles,leather, toys	<b>CCAD</b> Veterinary drugs	<b>CCPE</b> atural
<b>CCFD</b> Food	<b>CCPD</b> Pesticide residue	<b>CCHM</b> Others
<b>CCEM&amp;CCET</b> Environment		

The following five kinds product are special classification, according to the role of them, incorporated into the above 8 categories:

<b>CPAE</b> Phthalates	<b>CAZO</b> Azo compound	<b>COTI</b> Organotins
<b>CFRT</b> Organophosphate flame retardants		<b>CPAH</b> PAHs

The last two letters in product number of solution standards indicates the solvent, specifically as follows:

AL	Acetonitrile	HE	n-Hexane
BE	Benzene	IO	Iso-Octane
CY	Cyclohexane	MB	Methyl-tert.Butyl ether
DI	Dichloromethane	ME	Methanol
EA	Ethylacetate	TO	Toluene
EL	Ethanol	WA	Water

For example:

CCFD200174: reference standards, CCFD indicates it is food reference material.

LPAE111743-HE: solution standards, the "L" indicates it is the solutions of individual compounds, HE indicate solvent is n-Hexane.

MAZO111426-ME: solution standards, the "M" indicates it is the mixtures of compounds, ME indicate solvent is methanol.

## Quality and certification

### Quality

CATO China has passed the ISO9001: 2015 quality management system certification, and is the first Reference Material Producer (RMP) in the world that obtained dual capability certifications-ANAB ISO17034 and China CNAS ISO17034. As the only recipient obtaining dual certifications, CATO has excellent capabilities to provide customers with higher-quality products making analytical test data more accurate, and to become a more professional choice for customers.

### Certification

CATO solution standards are designed for calibration or recalibration of chromatographic or other analytical systems used for quantitative or qualitative purposes. The products may also be used as reference standards for studies and to validate analytical procedures.

All raw materials used to prepare the multicomponent mixtures are of the highest purity. After our production process, each material is checked using several of the following methods, if applicable: UV, IR spectroscopy, elemental analysis, chromatographic properties and physical properties and Karl Fischer titration for detection of water content.

### Analytical authentication

CATO Certificates of Analysis provide a full description of the material to which they relate and summarise the analysis undertaken during the characterisation process. Current Certificates of Analysis for individual lots/batches for products in the range are available on our website, <http://www.cato-chem.com> on the relevant product pages. If you are unable to find the product that you require please contact one of our local sales offices.
